CATALINA 350

The Catalina 350 is an all new design, incorporating many desired features usually found only in larger vessels. With an on deck length of 35'-3" and a beam of 13'-0" the 350 is a bigger boat and a true 35 footer.

Deep, secure coamings, and seats long enough for sleeping highlight the cockpit. Wide weather decks, tall life lines and inboard shrouds make for secure movement. A divided anchor locker has double rollers and an electric windlass. Sail controls are led aft on the cabin top to large winches within easy reach of the helmsman. The powerful, yet easily managed rig includes ball bearing blocks. Electric halyard winches and furling boom or mast are also available.

The versatile accommodations include settees that will serve as sea berths. Comfortable cabins fore and aft provide privacy for two couples. Separate stall shower, generous tankage, large battery banks, and big lockers above and below deck give the 350 the capacity and range necessary for comfortable cruising.

Below, you'll find a large navigation desk with space for navigation electronics and audio/visual entertainment center. Convenient to the cockpit and galley, this area provides a secure work station underway.

Auxiliary power comes from a smooth, four cylinder 35 HP diesel engine. A dependable power system providing reduced sound at cruising speed and more than enough propulsion for all conditions. Access to the filter and service points is easy and convenient.

The galley is well equipped and functional, with lots of counter space and storage. The divided refrigerator-freezer has front and top access doors.

The 350 interior is built from teak veneer bulkheads, with solid teak cabinetry and mouldings.

All interior woodwork is hand finished with multiple coats of varnish, without heavy stains.

Varnished teak interiors are durable and easier to touch-up, allowing you to keep your 350 interior yacht finish as a proper yacht.

Forward is the head with vanity counter, a full medicine cabinet, and an enclosed stall shower with a folding door and seat.

The "Owners stateroom" with centerline pedestal berth. The fully appointed stateroom includes lockers, drawers, and private access to the head. You'll find quilted, inner-spring mattresses with powder coated, rust resistant springs on both fore and aft double berths.

The game table to port stows to become a full length settee or berth.

Separate dining and cocktail tables are provided for versatility.

The 350 has a very roomy, wide cockpit with 5 lockers. Deep, comfortable seat backs with seats long enough to stretch out on with a convenient walk-through transom and stern boarding platform with shower outlet.

Standard equipment includes two bow rollers, a divided anchor locker for two sets of gear, a powerful windlass and a chain gypsy with power up and down controls.

All blocks are smooth, highly durable ball bearing construction. Ball bearing blocks mean less friction and easier crew work.

Available electric halyard/mainsheet winch. Makes raising or sheeting the mainsail effortless.

A truly cavernous lazaret is to starboard in the cockpit. Storage large enough to stow a bicycle or dinghy.

Stern seats integrated into stern rail with drink holder and outboard storage rack.
